

GATE VALVE TYPE ZS160 ; ZK160

CHARACTERISTIC:

Diameter	-	50 -500 mm;
Pressure	-	160 bar;
Temperature	-	up to 670°C;
Medium	-	water, steam and other non-toxic, non-aggressive media

VERSIONS:

type / body material / drive type / others

Example: ZS160 / -- / --- / ---

Example: ZS160 / U / NA / ---

Body material	Sign	Drive type	Sign	Others	Sign
(P250GH) C 22.8	---	Hand wheel	---	-----	---
16Mo3	U	AUMA drive	NA		
13CrMo4-5	A	NWA drive	NW		
10CrMo9-10	B	MODACT drive	NM		
14MoV6-3	C				
X10CrMoVNB9-1	E	Pneumatic drive	NP		

APPLICATION:

Gate valve is designed to open and stop the flow. The gate valve can be mounted to a pipeline in any position. It should operate in a close or open position.

MOUNTING AND OPERATING:

The gate can only be mounted and operated by skilled, properly trained and qualified personnel. Incorrect assembly or operation of the gate may have substantial impact on the entire system such as fluid leakage, reduction in system's function etc.

Before a gate is installed the pipeline must be clean from any mechanical impurities. The compatibility of critical parameters of the flow must be checked with the parameters of the gate. Gate can be mounted to a pipe-line in any position. The direction of the flow should only comply with the arrow marked on the body. The valve should be operated strictly with its assign. In order to provide gate's reliability the following suggestions must be observed:

- medium flowing through the gate is supposed to be clean out of any mechanical impurities;
- the valve must be protected from any mechanical damages during its work;
- nominal parameters marked on the valve must be observed.
